

INSTRUCTION GUIDE

SLIP JOINT COUPLING

Oatey

1 Remove the slip joint nuts and washers from the coupling.

2 Slide the slip joint nuts then washers over the existing tube ends. If using a 1-1/2 in. coupling with a 1-1/4 in. tube, use a reducing washer to make the transition.

3 Tighten the nuts, being sure not to overtighten.

4 Check for leaks. If leaks occur, tighten another 1/4 turn.
